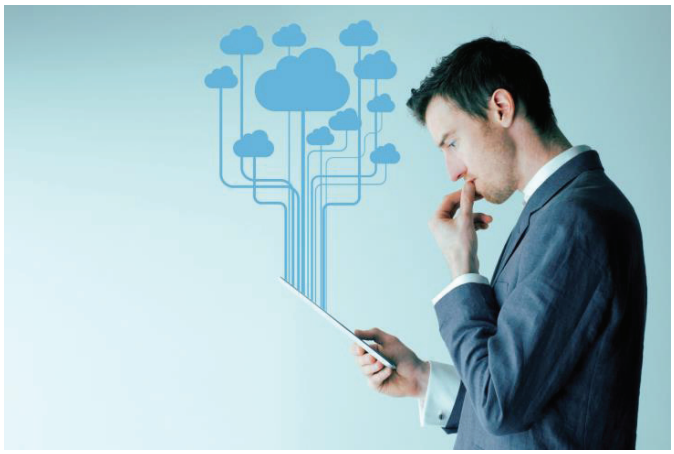
Arabic Pre-Processor API

EMPOWER YOUR ARABIC-BASED WESBITE OR SOFTWARE WITH AN ADVANCED ARABIC SEARCH ENGINE



Did you know?

Your users who use and browse your ARABIC website or software application can face difficulties in obtain accurate search results when searching using an Arabic phrase or word just because the Arabic language is widely different in writing and expression from one user to the other. Hence, your users most likely would not find what they are looking for on your product or website!

An advance API tool that works and integrates with your CMS and/or Back End system to normalize Arabic fields and labels.

How it works?

"Arabic Pre-Processor API" is an API tool that can work with your content management system or backend module of your website by "NORMALIZING" Arabic fields and texts no matter how "different" in writing your Arabic content has been added which as a result will give your end-users and clients obtain "highest accurate" Arabic search results.
